SAPL 24 LTMNP

Semi-trailer Plateau with a lightweight steel construction, Mega

Technical Data (basic version)

| | Tare weight | 3.865 | kgs |
|---|---|----------------|------|
| | Vertical load / technically possible | 11.000/ 12.000 | kgs |
| | Axle assembly load / technically possible | 24.000/27.000 | kgs |
| | Gross weight / technically possible | 35.000/39.000 | kgs |
| | Theoretical payload / technically possible | 30.700/34.700 | kgs |
| Α | Total length | 13.850 | mm |
| | Vehicle width | 2.550 | mm |
| В | Total height unloaden | 2.650 | mm |
| | Loading lenght | 13.620 | mm |
| | Loading width | 2.490 | mm |
| С | Coupling height (Attention: consider total height!) | 920 | mm |
| Е | Frame neck height (frame height over wheel coupling) | 90 | mm |
| F | Front overhang / front overhand radius | 1.680 /2.040 | mm |
| G | Wheel base | 6.390 | mm |
| Н | Axle spacing | 1.310 | mm |
| | Height of front wall | 1.600 | mm |
| | Tyres | 435/50 R19,5 | 6x |
| | Spring track / wheel track | 1.300 / 2.040 | mm |
| | Euro pallet capacity | 34 | Pcs. |
| D | Rear loading height, unladen (trailer in horizontal position) | 1.010 | mm |

SAPL 24 LTMNP

Semi-trailer Plateau with a lightweight steel construction, Mega

Technical Description (Basic Equipment):

- Welded frame construction made of fine-grained steel S700, cross beam spacing (Z-profiles) approx. 375 mm
- Mechanical landing gears 2 x 12 to
- SAF-brake system with disc brakes 370 mm; air suspension with raise/lowering device and operating valve at rear left
- Tires 6x, Goodyear, 385/65 R22.5, with steel rims
- Gef- brake system type Knorr, mit Roll Stability Program (RSP), EBS 2S/2M, parking brake as spring brake with double release valve, aluminum compressed air tank, diagnostic capability via EBS socket ISO 7638
- 24 V lighting system, Hella, 2 x 7-pin and 1 x 15-pin plug socket according to DIN ISO 3731/12098, 2 multi-functional rear light systems (including rear fog lamp and reversing light), 2 clearance lights with rubber arms, 2 clearance lights (LED) on the front wall, 4 pairs of side marker lights (LED)
- Stable ecotrail-hybrid floor, GRP fabric on the underside as reinforcement and protection against moisture, floor sections tightly sealed on the outer frame, permissible forklift axle load 7,000 kg in accordance with DIN EN 283
- Smooth front wall with high-strength sandwich panel, additional vertical and horizontal reinforcement profiles, front wall stanchions and reinforcement profiles made of S700 fine-grain steel, front wall panels riveted to front wall stanchions, 200 mm high protective strip integrated at bottom of the front wall panels, front wall bolted to the chassis
- Rear portal bolted to the chassis, rear portal stanchions made of S700 fine-grain steel, covered, rubber buffer left/right
- 18 pairs of lashing rings flush-fitted in outer frame, certified according to DIN EN 12640 for tensile loading of up to 2,500 daN
- Multifunctional perforated outer frame, 68 hook-in possibilities at spacing of 187 mm along the complete length of the outer frame on each side, lashing points certified according to DIN EN 12640 for tensile loading of up to 2,000 daN, other drilled holes available for additional fixing options of cargo control systems and other applications
- Practical equipment with semi-circular mudguards with integrated spray suppression according to 91/226/EEC
- 1 pc. of shim with holder
- © Extendable rear access ladder
- © ECE 70 reflector mounted on the spacer sheet
- Underride guard and lateral protective according to regulations, each made of aluminium profiles
- Paintwork for chassis and landing gear, front wall panel (outer surface only) and front wall frame in an RAL colour according to the customer's request (no metallic or brilliant colours). Connection board on the front wall, lateral protective device including holder and landing gear cross-brace painted in RAL 9005 black, semi-gloss; underride guard and intermediate plates in anodized aluminium. Profiles and inaccessible areas additionally protected with cavity wax.
